Best Project – SuperCracow.com

It's hard to choose my best and worst project i've been working at. But I think best is SuperCracow. It looks pretty good and works smooth. My task was to make the entire front i mean HTML, CSS, JavaScript/Jquery, PHP and implement it to wordpress as theme. The biggest problem with that project was spec, when I got it the site seemed simple but it wasn't. The problem appeared when client told me that he wants big managment panel for reservations. My friend made backend in Laravel and i did all JavaScript and views for it. Reservation form is not good as it should be, but it works well. I would make some changes right now, probaly I would write all form and views of client panel in Vue.js.

Worst project – Baletcolor.pl

This project maybe looks not so bad, but i've spend on it almost a year… Problem was with spec too. The specification did not describe what client exactly wants. I did it blindly. I made a lot of connections from galleries to performance, galery to offers etc. The client got lost in it and wasn't able to fill the fields alone. After explanation client did exactly the same mistakes. We had issues with two addons that didn't work with each other. If it would be possible i'd make this website again.
